June 8, 2011

Dear Mr. **ECKALOOK**;

RE: **SEISMIC SURVEY**
RPS ENERGY
BAFFIN BAY, NUNAVUT

This letter is in response to the seismic survey proposed to take place this summer on Baffin Bay.

The Nattivak Hunters and Trappers Organization on behalf of it's membership and the residents of Qikiqtarjuaq, Nunavut is not in favor on supporting the proposed seismic survey to be conducted by RPS Energy this summer on Baffin Bay.

According to information provided, the previous seismic surveys conducted in Baffin Bay had negative impact on the marine mammals especially beluga and this concern results to the narwhal population and an area of interest is the wintering area for the multiple narwhal population.

And according to the Inuit Qaujimatugangit (Inuit Traditional Knowledge) the area of interest also has marine mammals such as killer whales, bow-head whales, walruses, multiple fish species, polar bears and multiple migratory birds migrates to north during spring and migrates back during fall each year.

The area of interest provides country foods to both countries of Greenland and Canada and country food provides nutritious food for the families in both countries. Should the Qikiqtaani Inuit Association require further feed-back from the community of Qikiqtarjuaq, I would suggest that a letter should be submitted as soon as appropriate prior to the consideration on issuance of such permit from the federal government.

.../2

(2)

By a copy of this letter to appropriate agencies involved and the stakeholders, we are distributing copies informing them of the Nattivak Hunters and Trappers position in relation to the propose seismic survey.

Sincerely,

Samuel Nuqingaq
Chairperson

This is also submitted to Nunavut Government, Nunavut Impact Review Board, Nunavut Wildlife Management Board and Nunavut Water Board in order for these to come into effect.

I am forwarding this letter to this organization in regards to the mineral and oil & gas exploration that takes place and other studies that are done on wildlife on this barren environment in the Arctic including Government of Nunavut.

As Clyde River residents it is not useful for us, they cannot work with us and they do not inform us when activities are going to take place. We are starting to realize as northerners that commercial companies are interested and we will establish an environmental group in Clyde River in order for Clyde River to start receiving royalties from the companies that work up here. Because Mary River is of no use to Clyde River, therefore you as Nunavut officials are of no use anymore to various communities. Also, in the local communities there are no groups in the community who can bring out press releases. We need assistance with finances to start up a Clyde River Environmental group for this reason.

I know very well that I need to make a proposal to the Government of Canada because funding will have to be in place when we are going to work on environmental issues in Clyde River and an advisory committee has to be in place to deal with interested groups.

This is in order for you to realize that Clyde River community have the ability to maintain their environment and you will find out that we are not just ordinary individuals, we are real human beings in Clyde River and we have a Nunavut Territory and we hold sovereignty on behalf of and are invaluable citizens of Clyde River and Canada.

Therefore, we are going to make a request and you will hear about what kind of actions we would like to take here in the north.

We are aware that we do not get informed when activities are going to take place in our environment on the hunting grounds. This has to be safe guarded, our wildlife are being managed with false information because of lack of information towards us. This has to be of some use to our lives and our descendents.

To stop mining and oil & gas development. And you as environmental groups you should be more conscious and better represent the value of your people of Nunavut, on elected members by people of Nunavut.

Submitted by David Iqaqrialuk

Re: Comments to Seismic testing Proposal from David Ikkarrialuk

7+this

May 30, 2011

This is my concern on Lancaster Sound seismic testing proposal for gas and oil exploration and very important for the residents of Clyde River.

During their consultation, seismic testing briefing report on marine mammal was inadequate and they were not even edited and incomplete data on marine mammal and on environment and that is not acceptable.

Due to Lancaster Sound's rich biological diversity and habitat, the smaller marine mammals food chain such as krill, shrimp, turbot, halibut and all kinds of cod and sculpin and the ocean floor is rich with plants and food.

I am writing this letter because it is true and we are living proof since we have seen it and there needs to be an accurate seismic testing assessment before it goes ahead. Before the gas and oil exploration goes proceeds, a precise data should be completed on what extent it would destroy the marine mammals for us to have all the data if they are killed off since it would take a very long time to have returned in healthy numbers and this is our knowledge from what we have had to live with as Northerners.

It is no surprise since we do not have vegetation here in our homeland that we can survive on and there are no trees here either.

This is very important to us that we need to preserve and protect the animals in Lancaster Sound, we know that the current from the Lancaster goes to Clyde River and all the way to Qikiqtarjuaq.

This is a threat to us and therefore we need to acquire funds for us Northerners to do study.

We need to get a vessel with research equipment in order to do our study.

With the five year research proposal, we, the harvesters/hunters will need the funds to purchase research equipment so that we can begin our research first and the data collected would be more accurate. Give the following

communities research equipment: Clyde River, Pond Inlet, Arctic Bay, Resolute Bay and Grise Fiord. In order for the communities to proceed with the work that needs to be done, we will need funds to operate for five years according to their plan, we would need to be funded approximately \$5 million and on top of that, vessels would need to be purchased per community and the research equipment would be extra and very costly, obviously, since it is very expensive to make a living in the High Arctic communities as we know it.

We, the High Arctic residents in Nunavut, we have live off this big land of ours and survived. We have lived here for centuries and the land and the waters are our own, Government of Canada and recruits are obviously just visitors and just stealing the economic opportunities from the aboriginals, for us aboriginals, we should be given a chance to get benefits from our great big land, and we all know mining and oil/gas development will eventually have to start, as we are learning and with our own Government, all this that we own in our big backyard, the minerals and oil and gas and all the riches we have here in the North that we have to preserve and protect since our environment is harsh so have to be very careful with it.

Companies have done major developments behind our backs here in the North and this is illegal and we have been wronged in our land and our waters in all the development that have been ongoing for a long time. Since there is shortage of work for Northerners, this is a great opportunity for our future generations to own and work in their homeland.

This is also a great opportunity for our Government, Government of Canada, to pursue bigger economic sustainability if they can work very competently. They have to start working on it insistently and Canada can gain very much if they start discussions Canadians First/First Canadians can work closely together for all of us to benefit.

Because we have different cultures in our Nation, Nunavut-wise, the Southern region is different/opposite of the Northern region.

As Northerners, we are starting to understand the Northern issues and the North is our homeland and we depend on it since we have lived here for a very long time and survived and still live off the Arctic but as Inuit we have been reluctant to be proud because we live in a harsh environment and we were wrong there, we have realized that we are very important to live in our homeland in the Arctic, our land, Nunavut, we have live here for a very long time and we have to be involved in all areas of development in Canada's North. Mining and gas and oil exploration is important here in the Northern region, it can damage the land and the sea, the habitat of our animals and

marine mammals. We, as Northerners do not farm animals, our animals are wild and live freely in our land and waters and depend on the environment for survival, ecosystems in the Northern Hemisphere, as Northerners, more importantly, have to sustain and protect and conserve the Arctic environment so that Canada can be rich.

Therefore, our requests have to be heard. Since we do not know the cost in using vessels/ships with research equipment, to undergo a study of marine mammals, we need to discuss this further and also how we Northerners can obtain funds.

We Northerners should be proud of ourselves, we have nurtured visitors (the Qallunaat) who would have died otherwise in our harsh environment, unfortunately we could not save all of them, those that died of hypothermia and starvation, Inuit from the North saved a lot of visitors by feeding them country food and giving them traditional clothing for them to use for survival since they had no clue as how to survive in our harsh climate, and those that unfortunately died from 1920's to 1967.

There were sailboat ships that got stranded on ice that we have seen and that is how strong we are as residents of the North. Our Land, Nunavut is our homeland.

Today, the proposal for seismic testing in Lancaster Sound for gas and oil exploration, it is very important that we need to protect the region and to preserve and protect the regions marine mammals from harm from the testing and we, the northern community of Clyde River should safeguard our community.

Clyde River, if the community can get royalties, working closely with the residents, would protect the waters and mammals from harm through its currents.

More importantly, there have been whale and polar bear studies by non-northerners, ongoing news that is not true, there is plentiful of polar bear and whale population.

As Inuit and hunters, when there is dishonesty on paper and news, we Northerners are given a label and seen negatively by the world therefore we Northerners have to explain to the world instead of visitors that are working here giving out information on oil and gas exploration request, for the Inuit to speak out and be evident here in the Arctic, in our homeland. This written document is very important and I am stressed in order for us to move ahead in the wrong direction, as Canadians, since we have different culture. We have to be open and share information on how Canada is doing, what areas

it is struggling with. Our area in Canada is a beautiful rich place with an abundance of wildlife that inhabits our environment not just for sports.

I want Inuit Organizations to get a copy of this letter, firstly, Qikiqtani Inuit Association, they won the courtcase for the Inuit of Baffin Region in stopping the seismic study proposal to go ahead. In order for their beneficiaries to have a chance to be included and involved, credit goes out to them and we should have dignity that they could stop seismic study request and we are very grateful to QIA.

As a local Inuk, a hunter, a harvester, I am writing this letter of concern, and since we have knowledge in and around the area of Clyde River and the changes that are ongoing, that is our status, my fellow residents, Clyde River Inuit, we have the same concerns and they are not just agreeing to anything that is requested concerning their environment, such as Lancaster Sound seismic study proposal. Clyde River residents will not approve such development until they gain valuable benefits for their residents that they can use economically and this is very important to us.

Sincerely,

David Ikkarialuk, Clyde River, Nunavut, our beautiful land.

This letter is for those that are requesting seismic testing and National Energy Board, Federal Government c/o Leona Agluukkaq.

Also for Nunavut Tunngavik Inc., Nunavut Government's Environment Department, Nunavut Wildlife Management Board, Department of Fisheries and Oceans.

To:

Pond Inlet, Clyde River, Qikiqtarjuaq, Pangnirtung, Iqaluit and Kimmirut CLARC's

The Department of Lands and Resources is asking the CLARC's in the affected communities to provide comments on the proposed Baffin Bay and Davis Strait seismic exploration. QIA will use the comments to address Inuit concerns to the National Energy Board. The project is applying to do work for 5 years, starting in June 2011. The program will run from June to November or whenever the water freezes up.

This experiment will be conducting seismic experiments in the Baffin Bay and Lancaster Sound area. Seismic-experiments will create loud noises that will bounce off the bottom of the ocean. The sound, and the way in which it rebounds is recorded using a computer device. The sound recordings are used to develop maps which show the seabed environment. Producing sound for these purposes also means that anything near the sound device will hear it, including marine wildlife.

When the CLARC reviews this project, the CLARC should look at the potential effects that this type of experiment will have on the marine ecosystem:

- From your knowledge when will marine mammals be migrating through your region, approximately when do you expect to see the marine mammals?
- Will this project affect marine mammal harvesting rights?
- Which marine mammals may be affected?
- When are the most sensitive times for these animals?
- Are there any calving areas that would be affected?
- Are there any potential impacts to Inuit use and harvesting in the areas?
- Any other concerns that CLARC's may have, such as did the proponent consult the affected communities and is there additional information the CLARC would like to see as part of this application?
- Does the CLARC wish to inform their community about this project and seek comment from the community?

Please feel free to ask for clarification or more information.

Sincerely,

Nigel Qaumariaq

Environmental and Regulatory Affairs Advisor

**Community Lands & Resources Committee Meeting
May 27, 2011**

Present:

QIA Community Director
Elders Representative
Hamlet Representative

Community Liaison Officer

HTO Representative
Womens Representative

1. Order Of Meeting

Meeting opened with a prayer by Stevie at 6:15 pm

2. Proposed Baffin Bay & Davis Strait Seismic Exploration

According to the questions that were included on the Nigel Oaumariaq's letter, this is what was said and commented.

Q: From your knowledge when will marine mammals be migrating through your region, approximately when do you expect to see the marine mammals?

A: According to the dates given, those are the exact dates that the marine mammal will be seen in our area.

Q: Will this project affect marine mammal harvesting rights?

A: This will definitely affect the harvesting rights and within the whole community.

Q: Which marine mammals may be affected?

A: Ring Seals, Bearded Seals, Harp Seals, Narwhals, Bowhead Whales, Humpback Whales and Walrus: But still there are all kinds of other marine mammals that will also be affected but these are the mammals that we harvest through out the months mentioned in the proposal.

Q: When are the most sensitive times for these animals?

A: During the months of June, July & August are the Ringed, Bearded & Harp Seals. And during the months of September, October & November are all of the above plus the Narwhals, Bowhead and the Walrus.

- Q: Are there any calving areas that would be affected?
- A: Calving areas are during the months of June, July and August for the Bearded Seal, Narwhal and Beluga and other marine mammals not mentioned.
- Q: Are there any potential impacts to inuit use and harvesting in the areas?
- A: It will have a huge impact on seal hunting, narwhal hunting and bearded seal hunting
- Q: Any other concerns that CLARC's may have, such as did the proponent consult the affected communities and is there additional information the CLARC would to see as part of this application?
- A: The main concern is that the inuit harvesting rights will be changed forever and knowing that this is our main source of diet year round if an when available.
- Q: Does the CLARC wish to inform their community about this project and seek comment from the community?
- A: Decision was made that we the CLARC members collect comments and concerns from the community and also like to request that RPS Energy come in to do a consultation.

3. Adjournment

1. Call to order

Chairperson called the meeting to order at 4:15pm member Ikey Milton to open the meeting with prayer.

4. Nigel Qaumariaq Environmental & Regulatory Affairs Advisor, QIA Department of Lands Seismic project

Nigel Qaumariaq an Environmental and Regulatory Affairs Advisor with QIA sent a e-mail to the following communities; Pond Inlet, Clyde River, Qikiqtarjuaq, Pangnirtung, Iqaluit and Kimmirut CLARC's

The Department of Lands and Resources is asking the CLARC's in the affected communities to provide comments on the proposed Baffin Bay and Davis Strait seismic exploration. QIA will use the comments to address Inuit concerns to the National Energy Board. The project is applying to do work for 5 years, starting in June 2011. The program will run from June to November or whenever the water freezes up.

This experiment will be conducting seismic experiments in the Baffin Bay and Lancaster Sound area. Seismic-experiments will create loud noises that will bounce off the bottom of the ocean. The sound, and the way in which it rebounds is recorded using a computer device. The sound recordings are used to develop maps which show the seabed environment. Producing sound for these purposes also means that anything near the sound device will hear it, including marine wildlife.

When the CLARC reviews this project, the CLARC should look at the potential effects that this type of experiment will have on the marine ecosystem:

1. From your knowledge when will marine mammals be migrating through your region, approximately when do you expect to see the marine mammals?
 - They will be in the floe edge area in Button Point and Navy Board Inlet surrounding area starting in May, June onto mid July in late August, September onto October Narwhal, Bowhead,, Beluga, Bowhead start heading back to where they came from.
2. Will this project affect marine mammal harvesting rights?
 - Yes, for sure. There has been some seismic testing in the past Clyde River residents have expressed concerns that the seals end up being deaf and in so case they die.
3. Which marine mammals may be affected?
 - Narwhal, Beluga, Bowhead, Bearded seals, seals, ducks, Murres,
4. When are the most sensitive times for these animals?
 - Starting in May, June to mid July, Sept. and October
5. Are there any calving areas that would be affected?2

- The Narwhal start caving in May up until October .
 - They are not sure about Bearded seals, Hooded seal and Harp seals, they may calve in the land fast ice, in the middle of May young bearded seals are visible and their skin at this time of the year is pure black.
6. Are there any potential impacts to Inuit use and harvesting in the areas?
- They have sketched an area where they wanted it protected.
 - They are not sure if it's too close to Button Point it will have an affect for sure, if the could at least be 20 miles away from the shoreline.
7. Any other concerns that CLARC's may have, such as did the proponent consult the affected communities and is there additional information the CLARC would want to see as part of this application?
- DFO recently held a public meeting here in Pod Inlet on May 25, 2011 but there was a low turnout.
8. Does the CLARC wish to inform their community about this project and seek comment from the community?
- Mittimatalik HTO was involved in this and a public meeting was held, they didn't think they require more public consultation.

CLO further added that DFO held a public meeting on May 25, 2011 here in Pond Inlet in regards to the proposed seismic testing and the fact that he had managed to got a copy of the presentation.

We want to know the information about whales, they talk about whales in the context of Ametok. What are you doing about the whales? Their position to rivers? HTD's have 3 transmitters on Howards. Have any records been done on research on the effect on mammals (whales, Wherry)?

Done to studies let's, but more showing how

Ametok will be most of the sounds and will play, skin will affect Ametok and we will have displaced animals that will affect over lives.

What? Ametok know Polar Bears can get Ametok's long lasting bags what about mammals? They have been with hearing. In the 1950's was played offshore. What about displacement of animals migration routes.

Will you ~~collect~~ collect mammal's underwater, because mammal's are dangerous and go down but under water? and go

Date

Done, PAM possibly

Right now, Research? well, but a lot of mammal's you won't see, but are under the water. with microphones do you know how far? Done Not really correct. Trying to get IA data

March April? May not getting recorded really later in May. The higher you go the later

animal's can get there. you will then farther. Sound with water a lot further 3 farther. He knows the different calls. When springs when does ship. Howards's mammals. He 1 day before the ships come. He ~~the~~ used to work in Helms. He returned in the summer they would find dead animals.

Wanted about the negative in the past with humans and death of animals. What about the, loads from. How

They found Melville's of Seal CO's last summer

Date

DOE

- 10 Robert water 3 different
- 10 what happens if an accident with the seismic equipment
- 10 Do you stop when there is bad weather
- 10 Yes affect the recording
- 10 Do you know how long Marine Mammals' live
- 10 Bowhead's can live more 30 min to 1 hour you need longer wait times
- 10 Dove - good point, have to look at records

As a land, Melville's can live in 30-5 min
 Melville's can go 40 miles per an hour.
 They can go 10 Km.
 10 How fast in Ice.

Right now Melville between here & end Greenland

You need to go to HTO's

Do science 3 biology 1 don't understand.
 Show limit every's.
 Kaleb - go + hand to Science 3 Biology
 Robert to R... look in books in Science

and no Melville in front through
 Rovdekt.
 Hunt will not be totally with Science
 HTO's are involved, when.
 They want to talk about compensation
 to wildlife next time you visit.

Date

With you project, you will affect other
 mammals or marine. Will the project
 provide compensation if after five years
 their affect? 2 10 space we know
 no much relationship here.

Based on the animal's, what if the
 migration of Melville's are changed
 Canlon release's gear landing.

Don't do not feel apart
 of the process

~~Project~~
 Pond hole is still opened to Science.
 Understanding that you need to work.
 But if you + agencies need to
 see you more often in the company
 so that we can report our agreement
 if there is any affect's
 Dave - live come from England to see you
 and want's to come more

Smalgyree I'm worried about.

He is only one person but she does not want to see it. She only number's health from past work, she does not want to see it. He does not want to see it.

Example → when you first come in 1960's
 named of free rent. You going back on their word once they get what they want. Influencing others to follow, does not want to see service

David → David about effort!

- ↳ will you help limit business?
- ↳ rooms like only helping others with people.
- ↳ people are not comfortable with leaving
- ↳ you have to visit the other affected communities. Not just time.
- ↳ in port really worth a lot, limit made or good living
- ↳ number really for former's when natural disaster, limit really just or moved
- ↳ migration number need to be defined
- ↳ need TR/10 limit need to be involved
- ↳ visit all the affected communities

How to get ID knowledge on yearly meetings
 basis? big need on ID date.

He does not support this project.
 David he using in guns. He want's to see what it is going in the water

He does not want to worry about his good
 name. That will not make

David What happens to the date collected?
 It's will want to add that information
 to oil companies. NEB get's date for
 record after 7 to 10 years

Question why? when there are no leaves
 to do land upon? feels like you're
 in already going to approve it?

~~Can't get some of the money~~
 If going on 5 years you need to be level more.

The company can not up meetings with
 one community member's to learn how
 the project want.

There are other affected communities. The
 more communities and support you might
 get.

Meeting Start 7:30 30 people
Date 2 40 people
8:30 44

Company Presentation (Ended 8:05)

Community Questions

~~There~~ Will you be able see animal's under the water?

Done - No

How do you know when animal's are under water in the safety zone?

Left 1 start

There might be other creatures, sort copepods, what about animal's that don't breathe

~~There~~

I don't like that answer, because those animal's are apart of our lives, whales & seal's eat them

What are you doing here, when you won't listen to when we don't want this affecting our lives.

Company - it is up to the NEB to approve, it is company's job to keep the communities informed

Somebody came talking about underwater volcano's?

Done - No will not discuss on the south side

I want to see a picture of the eyeliner,

Date

We suggest the seals too much to defend them. Will this project affect them?

Dave - No it'll be done before it

What about animals in waves?

Please Answer my question

Andon - yes they might be mixed

↓ waves Tell you, you have to respect animals. If in waves, we want to ensure that our food is not interrupted

Why do you suddenly want to do these studies? Can't you do it with another method?

Why don't you have travelling equipment?

It is dangerous and we don't have proper communication.

Are your plans to do drilling?

Will you make money?

From
sell data to oil companies,
I wonder that Canada has come to

What about the animals, what have you done for them.

Date

After you've done it, will this affect our animals? I do not support what you are doing.

Shari: Environmental Scientist

Chain of events that it leads to, you one the first step. Therefore very important to be open & honest.

How does the source.

100M Boat

The picture is very deceiving

Map geographical - a large area

There is always fishing vessels in Baffin Bay. You don't want to get in the way of fishing & communities. Hopefully she made a comment

That oil companies will use that information.

Do not support what you do

When you're moving in here and there is a benefit or looks promising

Sound doesn't travel only down

Will fish be affected by the sound
How fish migrate

Will you have local limit on the Murray tract?

Don yes

We will watch to see who you hire? Keep media informed

How long until the benchmarks come back

I was told that survey it took over a year would two sides away, it is very hard

We suspect winds that were dead the same thing will happen

If survey being conducted for oil companies they want to sell it to oil companies

David hypothesis

We are, we are following procedures

It really hurts our feelings

I live in the very heart of Arctics

We have been through many times. We have to be careful with you.

In this information you provided evidence are not in the water.

111 1111 + 0+

In the sub

Our knowledge with our experience, you need our knowledge. There are ways to stop, though land use

planning. We have our own spirit, we want to do it ourselves. We are proud to from Arctics, we are

beneficial. We have been this many times, limit don't benefit. We don't want to be fooled again.

you + think they seem come here and do anything. It isn't right that they come? do anything they.

You guys aren't in power. You will not listen. The people are the little guys in the community should set up an environmental Assessment committee.

There was a survey of the land in the 1970's and of their oil spill movement will come this way.

Who will give approval?

We have representatives from the We want to have a representative Don M.T. ... D & ... on ... Road, where ...

Our animal's or Governing Member's

Why should
Animal's need to be in their natural
habitats when it is quite
No not want to be a source of profit at
the expense of our food

Yes - Consumers want food to NED
Your knowledge is very useful

Why are you doing this research?
Doing this research is important to
create jobs.

Even though we don't want there
jobs, why do you keep going.
We do not support what you are
doing. We don't benefit.

Not all limit not computers. What are
How can they come

Peter Lythompson

Thank you for coming
We are all concerned about our
best. This will affect it. I've
done research on how life is here
in the ...

When we start eating then brought
food we start to get sick. When
you overfeed the protesters. Because
of the food, I'm in. So if any affect a
wild hunt, I have some of research of
minors in water.

Placed of some in the water over feeding imbalance
from food. First
There will be animals that will be hard of
feeding. ~~to~~ I do not expect it.

I find this funny in words. It will
affect hunter's, because get in experience.
You need to get approval from the
people.

We know animal's, mammals under water for
long distances. I have a comment, at least
you come to consult. Just you didn't
come. When going to be living on our
land, we should benefit as well
You have to ~~last~~ share with
hunt. The criteria for foodland part
for animal's? also people.
Anything done, you need limit to be
more involved. If we are going to be
involved, you need to have more

As Hunt

For example the effect from humans is already known. When hunting needs they have hunting go operators needing to direct to one node. The need: learned more around the area. Your project will affect. I feel like we are not being respected

People

↳ I have concerns, we are always consulting
 ↳ we will start to share if cannot have meeting
 ↳ the only place to get heard is in the water.

Tonia HTD Board meeting. In Feb. wanted approval, we couldn't approve it. Had to go to a public meeting. As was very brief and to have this meeting. We do not make decision on our own, represent community members. All animals are very important to us. They are part of the environment of HTD, which community does not want remain same here.

POD...
 ↳ getting better
 ↳ creating information systems to
 ↳ work with low
 ↳ and more.

No thin approval for all five years or so you. She EA for five years, but approval is from year to year.

People

↳ When Colman's ~~was~~ come in thinking they know everything. Thinking that's just don't have knowledge.
 ↳ we are not going to get the acknowledgment

David

When companies come in when then have already made the plans and will not incorporate the hunt concerns into the design of the project. Then push a short deadline for the community to get back to you. It feels like this project. Asking concerns to the residents and behind you to make them needs to be developed to benefit the community. Because of the impact on people. A lot of owners to stop. Taking to hunt in the last resort. The amount of impact on the people's environment, we need to benefit for this project to be shared.

How can Imit benefit right away from this project. The people doing this project should come to C.R. to discuss how Imit can benefit financially, this must happen before the project starts. The community will have to talk with all stakeholders, need to have Imit from the start of the process. The company should some loss.

A lot of local food still eaten and depended on for generations. I will support if this project will have impact.

Don't to say towards. A-dang
 David → it is a lack of interpretation
 ↳ As long we benefit. Chris
 should be conditions if the quality of food is disturbed.
 if we have to go further for food.
 ↳ Overall contract to the negative effects. Impact Benefit's agreement.

If closer to land, need to meet with HTO's

Meeting, end 11:30pm
