2. RELEVANT FACTS / FAITS SAILLANTS	
<i>Briefly describe reasonable grounds to believe a violation has occurred / Décrire brièvement les motifs raisonnables de croire qu'une infraction a été commise</i>	
1. The National Energy Board Onshore Pipeline Regulations (OPR) 4(2) states: "Without limiting the generality of subsection (1), the company shall ensure that the pipeline is designed, constructed, operated or abandoned in accordance with the design, specifications, programs, manuals, procedures, measures and plans developed and implemented by the company in accordance with these Regulations". Section 6.6 of Enbridge's Environmental Guidelines for Construction 2013 addresses precautions that must be observed when working in fish habitats. Subsections 1.1 and 6.6 (4) state Enbridge employees and contractors must "suspend construction activities to allow for fish salvage to occur within the isolated areas prior to de-watering".	
2. On 27 May 2014, Enbridge notified the NEB in writing of a planned integrity dig on Line 4 at MP 104.4521 GW 30710 involving an excavation to assess results from an in-line inspection (ILI) tool. Enbridge indicated after the assessment was completed appropriate repairs would be made. The notification indicated if work was in close proximity or within a wetland/water body, or de-watering is required for the activity, appropriate measures such as installation of aqua dams, construction of berms, or use of pumps would be utilized to safely carry out the work. Enbridge indicated that for work taking place within a wetland or water body, a site specific environmental plan will be developed outlining all mitigative measures to be taken, in accordance with the Enbridge Environmental Guidelines for Construction, Operational Statements of the Department of Fisheries and Oceans, and any additional requirements of municipal, provincial and federal authorities. The work was originally scheduled to be carried out between 1 July and 31 October 2014, but was delayed due to weather. On 22 January 2015, Enbridge advised the NEB that work at this site had been delayed and that it was expected the work would be completed by February 28,	

2015.

3. On 12 February 2015, qualified environmental specialists employed by TERA Environmental Consultants assessed the integrity dig site. The crew found approximately 0.4 metres of water in the area. The crew started working on isolation and bridging of the site. It was determined that the proper materials were not available at that time to isolate based on the conditions. The crew was instructed to return to Calgary until equipment for isolation (i.e., aqua dams/sand bags) would be on site.

4. On 13 February 2015, qualified environmental specialists returned to the integrity dig site to isolate the work area. Once the aqua-dam was complete (upstream isolation) and sandbags with plastic sheeting were installed (downstream isolation), the crew began the fish salvage at approximately 18:00. The crew electro-fished and dip-netted for 1.5 hours. Due to the late hour, the crew decided to continue the fish salvage the next morning.

5. On 14 February 2015, qualified environmental specialists began day two of the fish salvage. The crew completed the fish salvage and fish processing at approximately 12:00. Between 13 and 14 February 2015, the crew captured 1507 fish (377 brook stickleback and 1142 fathead minnow). The fish salvage was conducted by qualified environmental specialists as required by Alberta Fish Research Licence FRL 14-3834 and Enbridge's Environmental Guidelines for Construction 2013.

6. On 18 February 2015, an Enbridge construction crew arrived at the site to begin the planned integrity work. During the water removal, additional fish were discovered by the construction crew. Instead of suspending construction activities to allow for fish salvage by a qualified environmental specialist as required by Enbridge's Environmental Guidelines for Construction 2013, the construction crew attempted to salvage the fish themselves using dip nets and buckets. The construction crew salvaged approximately 2,000 brook stickleback and fathead minnows, however the attempted salvage also resulted in 700 fish mortalities (a combination of brook stickleback and flathead chub). The fish salvage requirements as outlined in Alberta Fish Research Licence FRL 14-3834 listed the names of licensees (qualified environmental specialists) permitted to conduct the fish salvage. None of those individuals were on site to conduct or oversee the fish salvage on 18 February 2015 as required by Enbridge's Environmental Guidelines for Construction 2013.

7. On 19 February 2015, qualified environmental specialists returned to the site. After 1-2 hours of preliminary assessment, it was determined that previous isolation measures were not sufficient to achieve complete isolation at this site. Instead, it was decided that silt fencing be placed along the entire wetted width downstream and outside of the work space in order to keep fish from entering the isolation area.

8. On 20 February 2015, qualified environmental specialists resumed work isolating the area. Despite continuing efforts, isolation could not be achieved and work was stopped until a new plan could be put in place to properly isolate the area. Fish salvage efforts on this day resulted in an estimated capture and release of 17,300 fish with a ratio of approximately 60 fathead minnow for every 40 brook stickleback.

9. On 25 February 2015, Enbridge informed the NEB of the fish mortalities and provided additional information on the incident as requested. Enbridge indicated the planned integrity dig had been put on hold and was currently being re-evaluated to determine if it was necessary.

10. On 26 February 2015, the NEB notified the Department of Fisheries and Oceans (DFO) to inform them of the fish mortalities. DFO indicated the e-mail acted as sufficient duty to notify. DFO acknowledged the incident review already underway by the NEB and indicated DFO would take no further action on this file.

11. On 2 April 2015, in response to an NEB information Request, Enbridge indicated the original integrity dig on Line 4 at MP 104.4521 GW 30710 had been cancelled.

After Enbridge discovered that there were fish present in the isolation area it did not suspend the construction activities or have qualified environmental specialists present at the site to conduct the fish salvage as required by their own internal procedures and relevant provincial permits. Enbridge did not take all reasonable steps to prevent the fish mortalities on 18 February 2015.

Failure of construction workers to follow Enbridge's approved environmental practices resulted in 700 fish mortalities. Had appropriate measures been taken, the NEB believes these mortalities would have been preventable.
